About this guide

Introduction

This NLS-HR100 (“HR100”) Barcode Scanner User Guide provides general instructions for how to use it .

Chapter Description

Getting to Start: The chapter of Getting to Start gives a brief description of the HR100. It covers the general, overall specifications of the HR100.

General Programming: The chapter of General Programming describes the general methods to program HR100. There are two methods respectively Code Programming and Command Programming.

Query Command: The chapter of Query Command describes how to query related information of HR100 by reading programming codes.

Communication Programming: The chapter of Communication Programming describes the serial port programming and KBW programming.

Data Format: The chapter of Data Format describes how to use Prefix and Suffix to fulfill users' needs in more information of the barcodes.

Symbols, lists all the available symbols and provides the parameters supported by the HR100.

Tool – Handy item for a task.

Attention – Important subject to be aware of or to avoid.

Tips – Helpful information about a topic or a feature.

Example – Illustration of how to use a feature.

robind Auto-ID Support Center

If you have a problem with your equipment, contact the robin Support Center in your region. Before calling, have the model number, serial number, and several of your barcodes at hand.

Call the support Center from a phone near the scanning equipment so that the service person can try to talk you through your problem. If the equipment is found to be working properly and the problem is barcode readability, the Support Center will request samples of your bar codes for analysis at our plant.

If your problem cannot be solved over the phone, you may need to return your equipment for servicing. If that is necessary, you will be given specific directions.

Note: robin Auto-ID Tech. is not responsible for any damages incurred during shipment.

For service information, warranty information or technical assistance contact or call the Support Center listed below. For the latest service information go to <http://www.robinid.com>

If you purchased your robin product from a robin Business Partner, contact that Business Partner for Service.

Getting to Start

Introduction

HR100 is a 1D barcode reader. tqp Auto-ID patented **UIMG**™ technology ensure HR100 fast image capture and accurate decoding. It provides the customer the best value.

HR100 can be used as a hand-held reader. Ergonomically designed to provide comfortable and easy use.

This chapter presents an overall picture of how to use HR100 step by step. Please have an HR100 handy.

This chapter is recommended to general users, maintenance personnel, and software programmers.

Unpacking

Unpack HR100 and accessories. Check with the packing list. Make sure that there is no damage or missing part(s). If any damage or missing parts, please keep the original package and contact your supplier for services.

Outline of HR100

The figure below shows major components of HR100.

HR100 Outline

Data Interface

Pin	Function	Type	Name
1	CLK1	IO	Keyboard Clock Signal
2	DATA1	IO	Keyboard Data Signal
3	VCC	P	Power DC5V
4	TXD	O	Serial Port Output, RS232
5	RXD	I	Serial Port Input, RS232
6	CLK2	IO	PC Clock Signal
7	DATA2	IO	PC Data Signal
8	GND	P	Ground
9	D-	IO	USB Data Signal
10	D+	IO	

HR100 must connect to a Host to operate. A Host can be PC, POS, or any intelligent terminal with at least one of the following communication ports: USB, RS232, or PS/2.

1、USB

USB port on Host:

2、RS232

RS232 port on Host:

3、PS/2

PS/2 port on Host:

Please check the ports first to order the fitting cable.

- 1、 Insert USB Cable (RJ45 male head) into HR100 cable slot;
- 2、 Insert USB Cable (USB male head) into Host' s (female) USB connector;
- 3、 Click the HR100 Trigger to switch the unit on and it is ready to use.

- 1、 Insert RS232 cable (RJ45 male head) into HR100 cable slot;
- 2、 Insert RS232 cable (RS232 male head) into Host' s (female) RS232 connector;
- 3、 Connect RS232 cable and the mains with power adapter;
- 4、 Click the HR100 Trigger to switch the unit on and it is ready to use.

- 1、 Insert PS/2 cable (RJ 45 male DIN) into HR100 cable slot;
- 2、 Insert PS/2 cable (PS/2 male DIN) into Host PS/2 female slot;
- 3、 Connect PS/2 cable and the mains with power adapter;
- 4、 If necessary, keyboard can connect to female slot on the PS/2 cable;
- 5、 Click on the HR100 Trigger to switch the unit on and it is ready to use.

A Pin that fit the HR100 “Dismount hole” is needed. A paper clip could be ideal. Stretch one end of the paper clip to fit the “Dismount Hole” . Follow the steps:

- 1、 For RS232 and PS/2 connections, unplug the power adaptor.
- 2、 Insert the Pin into “Dismount Hole” and keep some pressure.
- 3、 Pull out the cable gently.
- 4、 Pull out the Pin after the cable is removed.
- 5、 Unplug the connector from the Host.

Power On

Connect HR100 and Host. One click the "Trigger". HR100 powers on and in "Idle" (ready to use) state (factory default).

Power Off

There are 4 ways to "Power OFF":

- » Remove Cable Off HR100;
- » Remove Power Adapter Off RS232 Cable;
- » Remove USB Cable Off the Host;
- » Remove PS/2 cable off the Host or power adaptor off.

IDLE Mode

When reader is NOT reading, it is in "IDLE mode".

No reading attempt within a timeout, the Imager switch to IDLE mode automatically.

RESTART

If HR100 halted and does not respond to operations, please "Restart" by "Power OFF", and then "Power ON".

Maintenance

- » The scan window must be kept clean. Improper maintenance will breach the limited warranty.
- » Avoid rough objects not to damage or scratch the window.
- » Use brush to remove the stain.
- » Use soft cloth (cloth for glasses) to clean.
- » Prohibit spraying towards the window.
- » Only use clean water as a cleanser.

- 1、 Ensure HR100, cables, and the Host are connected, then turn the unit Power ON
- 2、 Press & hold Trigger.
Illumination LED cast an Illumination Pattern (red light line) ;
- 3、 Keep Illumination Pattern in the center of a bar code. Zoom in and zoom out to allocate the Optimum Reading Stance.
- 4、 On a successful reading, there' ll be a beep sound, illumination die out. The HR100 then transmits barcode message to the Host.

NOTE: Experiences tell a certain range of distances has higher successful reading rate. This range is the Optimum Reading Stance.

HR100 Left View

The figure 1 HR100 Left View has the height dimensions.

Figure 1. HR100 Front View

HR100 Front View

The Figure 2 HR100 Front View has the length dimensions of scan window and handle.

Figure 2. HR100 Right Side View

HR100 Top View

The figure 3 HR100 Top View has the width and length dimentions of the head.

Figure 3. HR100 Top View

General Programming

Introduction

There are 2 ways to program (configure) the Engine, Code Programming and Command Programming.

Code Programming

The Engine reads a set of specially encoded barcodes to program options and features. In the following sections, we will explain the options and features available and provide the barcodes to program them.

This method of programming the Engine is most straight forward. However, it requires manually readings of each barcode. As all manual operations, errors are more likely to occur.

Command Programming

The Host can send the Pro CMD strings to program the Engine. In the following sections, the Pro CMD strings will be included with the barcodes for Code Programming.

This method of programming the Engine could be automated. A software program can be developed to download all the configuration data to the Engine. The program can also verify the download.

Note: Except some temporary programming, the programming results are restored in non-volatile memory. They will not be lost when the Engine is powered off.

Code Programming ON

Code Programming OFF

This is the notation to disable the Code Programming.

There are 3 parts of a notation:

- 1、The barcode for Code Programming
- 2、The name of the options or features, such as Disable Code Programming.
- 3、The corresponding Pro CMD string of the Code Programming.

Read the “Code Programming ON” barcode to activate “Code Programming” function. More than one Code Programming barcodes can be read to configure the Engine.

If an option or feature needs additional parameters, such as digits, they can be found at the end of this chapter.

The value of code programming can be sent to the Host. For factory default, “No Send Pro Code Value”, the value of programming codes will not be sent to the Host; by reading “Send Pro Code Value”, the reader will send the value of Programming Code to the Host.

Code Programming ON

Code Programming OFF

The factory default setting is “Code Programming ON”. Because it has low probability that a data barcode is the same as a programming barcode, it doesn’t need to close the function of Code Programming. Keeping it on won’t affect the daily using.

Some working parameters could be programmed. The data type of parameters is Dec or Hex and the numbers are also input through programming barcodes. The Appendix of the Integration Guide includes all needed data barcodes.

Programming barcodes are used to program the engine. For factory default, the reader will not send code value to the Host. But if needed, the engine could be programmed to "Send Pro Code Value". And whether the value is sent or not won't affect the programming function. But "Send Pro Code Value" is a temporary setting. It will restore to "No Send Pro Code Value" when the engine is restarted or closed.

Code Programming ON
【Pro CMD: 99900031】

Code Programming OFF
【Pro CMD: 99900032】

No Send Pro Code Value
【Pro CMD: 99900033】

Send Pro Code Value
【Pro CMD: 99900034】

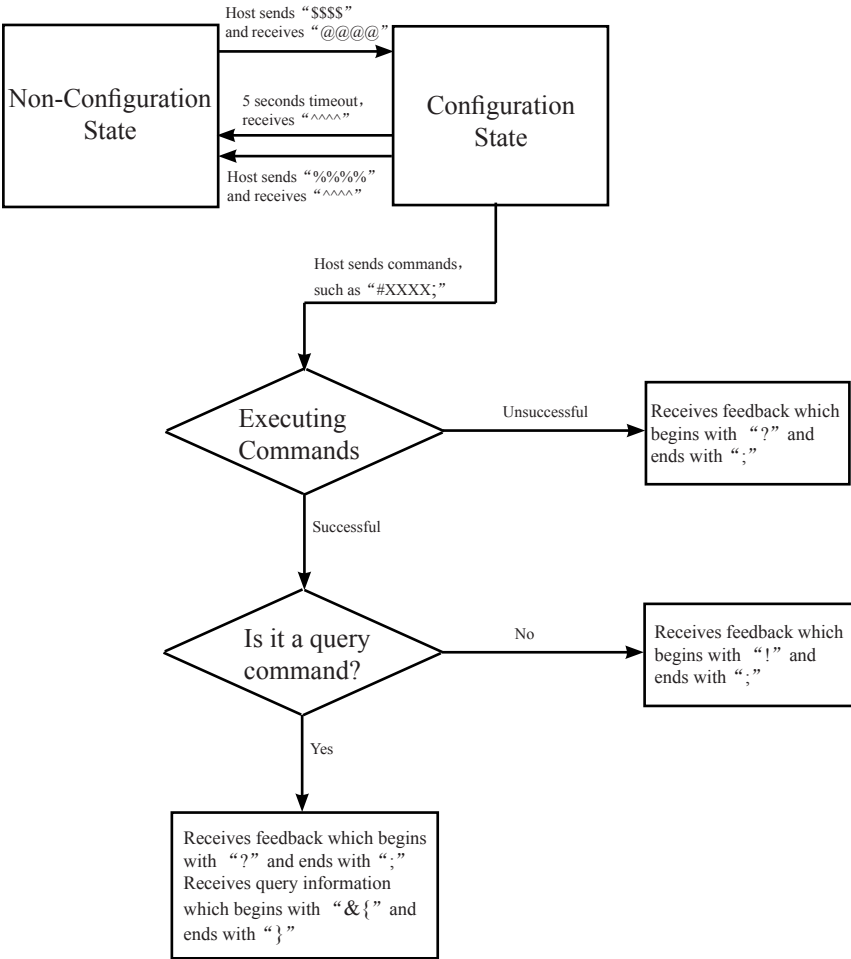

The engine should be in configuration state when programming functions under RS232 connection. In the state, the engine would only accept and execute the commands from communication and feed back.

2、Express Regulation

- Page 18

3、Flow Chart

Factory Default

Read “Load All Factory Default” to reset all parameters to factory default.

Applicable conditions:

- » User options programming wrong configuration leads to reading malfunction
- » Forget details of previous programming and start over.
- » Restore to default after unusual settings are not needed.

Code Programming ON

Code Programming OFF

Load All Factory Default

Code Programming ON

Code Programming OFF

Shut Down¹

【Pro CMD: 99900100】

Deep Sleep²

【Pro CMD: 99900101】

Sleep³

【Pro CMD: 99900102】

Test Mode⁴

【Pro CMD: 99900103】

Restart

【Pro CMD: 99900104】

Note:

- 1、 The engine couldn't be awaked. It must restart or power on.
- 2、 It should be awaked by a trigger.
- 3、 It could be awaked by communication or a trigger.
- 4、 Use a trigger to quit test mode.

All these five modes are temporary. They will disappear and restore to former mode if the engine restarts or powers off.

Hand-held Mode

Factory Default, scan engine will begin to scan when triggered. And when it scans successfully or the trigger is released, the engine will stop scanning.

Hand-held Mode

【Pro CMD: 99900110】

In hand-hald mode, the engine could set time length to read barcodes.

Time length to read barcodes

【Pro CMD: 99900150】

Code Programming ON

Code Programming OFF

Auto Mode

First program the engine, then trigger it, the engine will start to scan. After a scan, the engine will not stop but start a new one automatically until another trigger. By default, the engine will not repeat reading a same barcode.

Code Programming ON

Code Programming OFF

Auto Mode
【Pro CMD: 99900111】

In auto mode, the engine could set time length to read barcodes, and set if it could read same barcode.

Time length to read barcodes
【Pro CMD: 99900150】

Disable Reading Same Barcode
【Pro CMD: 99900155】

Restart Timer After a Valid Reading
【Pro CMD: 99900157】

Enable Reading Same Barcode
【Pro CMD: 99900156】

Do Not Restart Timer After a Valid Reading
【Pro CMD: 99900160】

» Reading Same Barcode

When enabled, after a successful read, the engine will not stop but start a new one automatically until another trigger.

When disabled, after a successful read, if the next barcode is the same one, the engine will keep waiting. If the next barcode is different, the engine will not stop but start a new one automatically until another trigger.

» Restart Timer After a Valid Reading

When enabled, after a successful read, the engine will revert the reading time to zero and restart timer.

When disabled, no matter how many barcodes have been read, when the length of reading time is equal to the default value of "Time length to read barcodes", the engine will stop reading.

Interval Mode

After programming, the engine will start interval scan without trigger. The interval between two scans is fixed whether the scan is successful or not. The value of interval could be programmed by user and the default value is 500ms.

Code Programming ON

Code Programming OFF

Interval Mode

【Pro CMD: 99900112】

Time length to read barcodes

【Pro CMD: 99900150】

Interval Length

【Pro CMD: 99900151】

Interval takes 500ms as a unit and could be classed in fifteen levels:0-15.For instance, interval could be programmed to 5000ms:

- 1、Read “Code Programming ON”
- 2、Read “Interval Length”
- 3、Read numbers “1” “0”
- 4、Read “Code Programming OFF”

Sensor Mode

After programming, the engine will start to sense the environment without trigger. After a scan, it will stop and keep sensing to wait another illumination changing. In sensor mode, a trigger also can start a scan. The sensitivity level could be chosen.

Code Programming ON

Code Programming OFF

Sensor Mode

【Pro CMD: 99900113】

In sensor mode, the engine could set time length to read barcodes, and set interval length as sensing stabilization time.

Time length to read barcodes

【Pro CMD: 99900150】

Interval Length

【Pro CMD: 99900151】

Sensitivity is used to evaluate the engine's ability to sense the changing environment. Users can choose a sensitivity level which suits the environment.

High Sensitivity

【Pro CMD: 99900152】

Low Sensitivity

【Pro CMD: 99900154】

Medium Sensitivity

【Pro CMD: 99900153】

User Sensitivity

【Pro CMD: 99900161】

Sensitivity Level Programming

There are sixteen levels of 0 to F. The lower the value is, the higher the sensitivity level is.

For instance, we could program sensitivity level as 5 level.

- 1、Read “Code Programming ON”
- 2、Read “User Sensitivity”
- 3、Read number “5”
- 4、Read “Code Programming OFF”

Continuous Mode

After programming, the engine will be in continuous mode without trigger. After a successful scan, the engine will be in waiting state until another scan, then wait again.

Code Programming ON

Code Programming OFF

Continuous Mode
【Pro CMD: 99900114】

In continuous mode, the engine could set time length to read barcodes and interval length.

Time length to read barcodes
【Pro CMD: 99900150】

Interval Length
【Pro CMD: 99900151】

Delayed Sensor Mode

After programming, the engine will start to sense the environment without trigger. There will be a delay before a scan. After a scan, it will stop and keep sensing to wait another illumination changing. In sensor mode, a trigger also can start a scan. The sensitivity level could be chosen.

Code Programming ON

Code Programming OFF

Delayed Sensor Mode
【Pro CMD: 99900115】

Command Triggered Mode

After programming, sending a command to the engine will start a reading.

Code Programming ON

Code Programming OFF

Command Triggered Mode
【Pro CMD: 99900116】

If a reading is failed, the engine will send a character which means a reading failure. Users could set the character themselves.

Set Reading Failure Character
【Pro CMD: 99904200】

The higher the value of Security Level is, the lower the probability of mis-decoding and the decoding speed are. Otherwise, the speed is higher.

Communication Programming

Introduction

Under RS232 connection the engine and the Host use the same communication parameters: baud rate, parity check, data bits select and stop bits select.

Under RS232 connection, the engine and the Host should set communication baud rate to the same to keep normal communication.

Baud rate is the bits transmitted per second (8 bits per bytes). The engine and the Host must communicate at the same baud rate.

The reader supports baud rate as the following:

Data Format

Introduction

1D barcodes could contain digits, letters and symbols, etc. 2D barcodes could contain more data, such as Chinese characters and other multi-byte characters. However, in reality, they do not and should not have enough information we need, such as barcode type, date and time of scan, delimiter, and so on, in order to keep the code short and flexible.

Prefix and Suffix are how to fulfill the needs mentioned above. They can be added, removed, and modified while the original barcode message is still in tact.

Barcode processing sequences: first add Prefix/Suffix, then terminate with
Stop Suffix and transmit.

Code Programming ON

Code Programming OFF

CodeID+User Prefix+AIMID
【Pro CMD: 99904010】

User Prefix+CodeID+AIMID
【Pro CMD: 99904011】

Disable or Enable User Prefix

User Prefix is added before barcode message. For example, if the user prefix is “AB” and the barcode message is “123” , the Host receives “AB123” .

Code Programming ON

Code Programming OFF

Disable User Prefix
【Pro CMD: 99904020】

Enable User Prefix
【Pro CMD: 99904021】

Program User Prefix

Enable “Program User Prefix” . Then program user prefix byte(s). To end the prefix, read “Save programming” The user prefix byte is programmed in its hex values. See example below.

Program User Prefix
【Pro CMD: 99904022】

Example

Program “CODE” as user prefix (The hex of “CODE” are 0x43/0x4F/0x44/0x45):

1. Read “Code Programming ON”
2. Read “Program User Prefix”
3. Read “4,3,4,F,4,4,4,5” in order
4. Read “Save Programming”
5. Read “Code Programming OFF” .
6. Read “Allow User Prefix” to enable above programming. “CODE” will appear to the left of a barcode.

AIM (Automatic Identification Manufactures) defines AIM prefix for many standard barcode formats. The engine will add the identifier before the barcodes. And this identifier is the AIM Prefix. And please see Appendix to find the AIM ID list.

Code Programming ON

Code Programming OFF

No AIM Prefix

【Pro CMD: 99904030】

Full Characters Mode

【Pro CMD: 99904031】

Data Format

Code ID Prefix

Tools

Besides AIM prefix, Code ID prefix can be used to denote barcode format and can be customized.

The Code ID prefix MUST be one (1) visible English letter, capital or small, only.

Code Programming ON

Code Programming OFF

No Code ID Prefix

【Pro CMD: 99904040】

Allow Code ID Prefix

【Pro CMD: 99904041】

Load Code ID Factory Default

【Pro CMD: 99904042】

Disable or Enable User Suffix

Code Programming ON

User suffix is appended to the right of barcode message. For example, if user suffix is “AB” , and the barcode message is “123” , The Host receives “123AB” .

Code Programming OFF

Disable User Suffix
【Pro CMD: 99904100】

Enable User Suffix
【Pro CMD: 99904101】

Program User Suffix

Read “Program User Suffix” . Then program user suffix byte(s). To end the suffix, read “Save programming” . The user suffix byte is programmed in its hex values. See example below.

Program User Suffix
【Pro CMD: 99904102】

E
xample

Program “AGE” as user suffix (The hex of “AGE” are 0x41/0x47/0x45):

1. Read “Code Programming ON”
 2. Read “Program User Suffix”
 3. Read “4,1,4,7,4,5” in order
 4. Read “Save Programming”
 5. Read “Code Programming OFF”
 6. Read “Allow User Suffix” to enable above programming. “AGE” will appear to the right of a barcode.
-

Disable or Enable Stop Suffix

“Stop Suffix” is the termination for a string of barcode messages. It is fixed to the right and the very end of a barcode transmission.

The major difference between "Stop Suffix" and "User Suffix" is that the information and the decoded messages in user suffix could be formatted but couldn't in stop suffix.

Code Programming ON

Code Programming OFF

Disable Stop Suffix
【Pro CMD: 99904110】

Enable Stop Suffix
【Pro CMD: 99904111】

Program Stop Suffix

Read “Program Stop Suffix” . Then program stop suffix byte(s). To end the suffix, read “Save programming” . The stop suffix byte is programmed in its hex values. See example below.

Program Stop Suffix
【Pro CMD: 99904112】

Set Stop Suffix as 0x0D and Enable Sending
【Pro CMD: 99904113】

Set Stop Suffix as 0x0D,0x0A and Enable Sending
【Pro CMD: 99904114】

E xample

Program a Windows general line feed as stop suffix (The hex are 0x0D/0x0A):

1. Read “Code Programming ON”
 2. Read “Program Stop Suffix”
 3. Read “0,D,0,A” in order
 4. Read “Save Programming”
 5. Read “Code Programming OFF”
 6. Read “Allow Stop Suffix” to enable above programming. A line feed will appear to the right of a barcode.
-

Symbols

Introduction

Each type of barcode has its unique attribute. With the programming code, the engine will adjust to the changes of these attributes. Disabling reading of the symbols which do not apply will improve reading performance.

Disable Interleaved 2 of 5

【Pro CMD: 99911201】

When the engine can not read Interleaved 2 of 5, please read “Enable Interleaved 2 of 5” and try again

Interleaved 2 of 5 Code ID

Code ID Setting

【Pro CMD: 99911210】

Example

Example of setting Interleaved 2 of 5 Code ID to “p” (0x70)

1. Read Enable Code Programming barcode.
2. Read Interleaved 2 of 5 Code ID Setting barcode.
3. Read Following Barcodes: “7” , and “0”
4. Read Save barcode
5. Read Disable Code Programming barcode.

Check Digit

Interleaved 2 of 5 may include Check Digit (not compulsory) following its barcode messages. If included, it could be the last digit. It verifies the barcode message.

» “NO Check, Transmit All” means to read without check and transmit all bytes including barcode message and Check digit.

» “Check, Do Not Transmit Check Digit” means to read and check. If verification is successful, transmit barcode message; if not, engine sends an error beep.

» “Check, Transmit All” means to read and check. If verification is successful, transmit all messages; if not, engine sends an error beep.

Code Programming ON

Code Programming OFF

“NO Check, Transmit All”

【Pro CMD: 99911203】

Check, Do Not Transmit Check Digit

【Pro CMD: 99911204】

Check, Transmit All

【Pro CMD: 99911205】

When “Check, Do Not Transmit Check digit” is enabled and barcode message length minus one is less than Min Message Length, it will lead to error beep.

E.g.: Reading a 4-byte (include check Digit) Interleaved 2 of 5 with the Min Message Length being 4 bytes and “Check, Do Not Transmit Check digit” enabled leads to error beep.

Select Message Length

It is used to program the valid reading length of Interleaved 2 of 5. The engine will send an error beep, if the decoded data length does not match the valid length.

Interleaved 2 of 5 Message Length is defined by “Min. Message Length” and “Max. Message Length”

Code Programming ON

Code Programming OFF

Min Message Length
【Pro CMD: 99911206】

Max Message Length
【Pro CMD: 99911207】

1D bar code Message Length should not exceed 255 bytes. If Max Message Length is less than Min Message Length, it means the engine will only support barcodes of the two lengths. If Max Message Length is equal to Min Message Length, the engine will only support barcodes of the length.

Example

To set Min Message Length of Interleaved 2 of 5 as 8 bytes, and Max Message length as 12 bytes, read these programming codes:

1. “Code Programming ON”
2. “Select Min Message Length”
3. Digit Code “8” , see Digit Code Appendix (Pxxx)
4. “Save Programming” , see Digit Code Appendix (Pxxx)
5. “Select Max Message Length”
6. Digit Code “1”
7. Digit Code “2”
8. “Save Programming”
9. “Code Programming OFF”

ITF-6 is a fixed length 6 bytes Interleaved 2 of 5 barcode with check digit.
When enabled, ITF-6 precedes 6-byte Interleaved 2 of 5 barcode.

Load ITF-6 Factory Default
【Pro CMD: 99911300】

Disable ITF-6 User Selection
【Pro CMD: 99911301】

Enable ITF-6, Do Not Transmit Check Digit
【Pro CMD: 99911302】

Enable ITF-6, Transmit Check Digit
【Pro CMD: 99911303】

For instance, when ITF-6 is enabled and Interleaved 2 of 5 is disabled, the ITF-6 and 6 bytes Interleaved 2 of 5 with check digit can be read, but other Interleaved 2 of 5 can not.

ITF-6 Code ID

Code ID Setting
【Pro CMD: 99911304】

Example

- Example of setting ITF-6 Code ID to “p” (0x70)
1. Read Enable Code Programming barcode.
 2. Read ITF-6 Code ID Setting barcode.
 3. Read Following Barcodes: “7” , and “0”
 4. Read Save barcode
 5. Read Disable Code Programming barcode.

ITF-14 is a fixed length of 14 bytes Interleaved 2 of 5 barcode with Check digit. By factory default, it is disabled.

When enabled, ITF-14 precedes 14-byte Interleaved 2 of 5 barcode.

Code Programming ON

Code Programming OFF

Load ITF-14 Factory Default
【Pro CMD: 99911400】

Enable ITF-14, Do Not Transmit Check Digit
【Pro CMD: 99911402】

Disable ITF-14
【Pro CMD: 99911401】

Enable ITF-14, Transmit Check Digit
【Pro CMD: 99911403】

For instance, when ITF-14 is enabled and Interleaved 2 of 5 is disabled, the ITF-14 and 14 bytes Interleaved 2 of 5 with check digit can be read, but other Interleaved 2 of 5 can not. If the programming of ITF-14 violates the one of Deutsche 14, ITF-14 precedes Deutsche 14.

ITF-14 Code ID

Code ID Setting
【Pro CMD: 99911404】

Example

Example of setting ITF-14 Code ID to “p” (0x70)

1. Read Enable Code Programming barcode.
2. Read ITF-14 Code ID Setting barcode.
3. Read Following Barcodes: “7”, and “0”
4. Read Save barcode
5. Read Disable Code Programming barcode.

Transmit Check Digit

【Pro CMD: 99912712】

When “Check, Do Not Transmit Check Digit” is enabled and barcode message length minus one is less than Min Message Length, it will lead to error beep.

E.g.: Reading a 4-byte (include Check Digit) Code 11 with the Min Message Length being 4 bytes and “Check, Do Not Transmit Check Digit” enabled leads to error beep.

Select Message Length

It is used to program the valid reading length of Code 11. The engine will send an error beep, if the decoded data length does not match the valid length.

Code 11 Message Length is defined by “Min. Message Length” and “Max. Message Length” .

Code Programming ON

Code Programming OFF

Min Message Length
【Pro CMD: 99912713】

Max Message Length
【Pro CMD: 99912714】

ID bar code Message Length should not exceed 255 bytes. If Max Message Length is less than Min Message Length, it means the engine will only support barcodes of the two lengths. If Max Message Length is equal to Min Message Length, the engine will only support barcodes of the length.

Example

To set Min Message Length of Code 11 to 8 bytes and the Max Message Length to 12 bytes. Read these programming code:

1. “Code Programming ON”
2. “Select Min Message Length”
3. Digit Code “8” , see Digit Code (Appendix Pxxx)
4. “Save Programming” , see Digit Code (Appendix Pxxx)
5. “Select Max Message Length”
6. Digit Code “1”
7. Digit Code “2”
8. “Save Programming”
9. “Code Programming OFF”

E

xample

Example of setting Plessey Code ID to “p” (0x70)

1. Read Enable Code Programming barcode.
2. Read Plessey Code ID Setting barcode.
3. Read Following Barcodes: “7” , and “0”
4. Read Save barcode
5. Read Disable Code Programming barcode.

Check Digit

Plessey may include Check Digits (not compulsory) following its barcode messages. If included, they are the last two digit. They verify the barcode message.

» “NO Check, Transmit All” means to read without check and transmit all bytes including barcode message and Check Digit.

» “Check, Do Not Transmit Check Digit” means to read and check. If verification is successful, transmits barcode message; if not, engine sends an error beep.

» “Check, Transmit All” means to read and check. If verification is successful, transmits all messages; if not, engine sends an error beep.

In order to save the received data “Save” has to be read after data transition completed. If error occurs when reading data, the wrong data can be deleted and the setting up can be done again..

Eg, after a program code is received then ‘1 2 3’ in order is received, if then read “Abort One Data of Current Setting” the “3” will be deleted; if read “Abort One String of Current Setting” the ‘123’ will be deleted; if read “Abort Current Setting” both the program code and ‘123’ will be deleted, the device will be on status of “initiating program code” .
